

Pro Audio Training Academy — Store Copy, Metadata & Submission Plan

Master working document. Compiled 2026-09-13. Listing copy authored by Cháno; metadata + plan refined in ChatGPT; scope, counts, and current store requirements verified by Computer A against the live app and Apple/Google docs. One number corrected (see Section 6).

1 | App Store / Google Play — Full Description (FINAL)

Start with a free professional-audio glossary—then explore the complete profession and science of sound.

Pro Audio Training Academy goes far beyond definitions. While most audio apps focus on one corner of the field—a DAW, an instrument, or a mixing technique—the Academy brings the entire field together in one guided, mastery-based learning path.

EXPLORE THE FULL WORLD OF AUDIO

- Studio recording, music production, electronic music, and synthesis
- Mixing and mastering
- Live sound for concerts, theater, worship, and clubs
- Post-production, film scoring, game audio, and immersive/spatial audio
- Broadcast, podcasting, and streaming
- Sound-system engineering, commercial AV, installation, and audio networking
- Audio electronics, transducer design, service, and repair
- Acoustics, psychoacoustics, measurement, and sound visualization
- Hearing science and medical and clinical acoustics
- Ultrasonics, bioacoustics, environmental noise, and sound law
- AI audio, forensic audio, and audio preservation

LEARN BY DOING

- Complete interactive tap-and-swipe lessons, flashcards, and applied real-world scenarios
- Master one topic at a time, with quizzes that unlock as you progress
- Learn through ear-training, equipment, mixing, microphone-technique, and other interactive labs
- Use professional-audio calculators and hands-on measurement, visualization, analysis, and reference tools
- Earn verifiable credentials across 36 professional programs tied to a 166-topic curriculum
- Explore 20 career fields and discover more than 1,800 real roles through the Career Finder

BUILT FROM REAL-WORLD EXPERIENCE

Pro Audio Training Academy was created by a 28-year audio educator with 40 years working in the audio industry. Every part of the Academy is grounded in real studio, stage, installation, and laboratory

practice—not textbook theory alone.

Start free with the professional-audio glossary, Pro Audio Safety, and DAW Fundamentals. Membership unlocks the complete Academy.

[Correction applied: “170-topic curriculum” → “166-topic curriculum” to match the live catalog — see Section 6.]

2 | Final Store Metadata

App name — Apple and Google

Pro Audio Training Academy

Apple subtitle — 28 of 30 characters

Audio Glossary, Labs & Tools

Apple promotional text — 143 of 170 characters

Explore professional audio with a free glossary, interactive labs, calculators, measurement tools, career guidance, and verifiable credentials.

Google Play short description — 75 of 80 characters

Learn pro audio with a free glossary, interactive labs, tools, and quizzes.

Apple keywords — 100 of 100 characters

acoustics, engineering, recording, mixing, mastering, studio, live, sound, DSP, microphone, SPL, RTA, DAW, career

Do not repeat words already in the app name or subtitle. Google Play has no separate keyword field; search terms should appear naturally in the name, short description, and full description.

Category

Apple primary: Education · Apple secondary: Reference · Google Play: Education

Contact and policy

Support email: info@proaudiotrainingacademy.com · Marketing site: proaudiotrainingacademy.com

Provide separate, functional destinations for Customer Support, Privacy Policy, Terms of Use, and Account/Data Deletion. Do not point every required URL at the homepage unless each destination is clearly visible and directly accessible there.

3 | Scope Map — Documented App Coverage

20 fields · 50 subjects · 166 topics · 36 professional programs · more than 1,800 Career Finder roles.

MAKE THE RECORD: Studio recording; music production; electronic music and synthesis; mixing and mastering

SOUND FOR THE STAGE: Live sound and production; concerts and festivals; theater and worship; DJ and club audio

SOUND FOR PICTURE: Post-production; film scoring; game and interactive audio; immersive and spatial audio

BROADCAST AND STREAMING: Radio; podcasting; streaming; broadcast systems and air chains

BUILD THE SYSTEM: Audio-systems engineering; commercial AV and installation; audio networking; vehicle and consumer audio

DESIGN AND SERVICE THE HARDWARE: Transducer and loudspeaker engineering; audio electronics; service and repair; analog and vintage technology

THE SCIENCE OF SOUND: Applied and physical acoustics; psychoacoustics; sound visualization and imaging; audio measurement

HEARING AND HEALTH: Hearing science; medical and clinical acoustics; audiology standards

SOUND IN THE WORLD: Ultrasonics and industrial audio; bioacoustics and ecoacoustics; seismic and space sound; environmental noise and sound law

FRONTIER TECHNOLOGY AND STEWARDSHIP: AI audio; DSP and machine learning; forensic and investigative audio; preservation, restoration, and archival work

4 | Store Submission Plan — September 2026

Current technical gates — Apple

- Complete the updated App Store age-rating questionnaire.
- Submit a build created with Xcode 26 or later using the iOS 26 SDK.
- Provide complete, accurate metadata, screenshots, privacy disclosures, review notes, and functional URLs.
- Give App Review full access via an active review account or a fully featured demonstration mode.

Current technical gates — Google Play

- Target Android 16 (API level 36) or higher for a new app submission.
- Register the developer account under Pro Audio Training Academy LLC as an organization.
- The 12-tester, 14-day closed test applies to qualifying new personal accounts, not organization accounts.
- The existing D-U-N-S number avoids waiting for a new one, though Google organization-verification may still take processing time.

Privacy and account requirements

- Complete Apple App Privacy and Google Data Safety using the app's actual production behavior.
- Publish a functional Privacy Policy, easily accessible inside the app.
- Provide in-app account deletion, plus a separate web-accessible deletion request for Google Play.
- Explain what is deleted, what may be legally retained, and the expected processing time.
- Audit every production analytics, crash-reporting, authentication, cloud-storage, notification, and payment SDK before completing the privacy forms.

Authentication

- Confirm email/password, Google sign-in, and Sign in with Apple work in production.
- Confirm linked-login credentials can be revoked as required.
- Test account creation, login, logout, password recovery, account deletion, and restoration of an existing account.

Community directory and user content

Because users can add a profile photo and opt into the community directory:

- Require acceptance of the Terms of Use before publishing a profile.
- Provide a way to report inappropriate profiles, photos, or behavior.
- Provide blocking wherever users can view or interact with others.
- Run an active moderation and removal process.
- Publish accurate support contact information.
- Use fictional user information in store screenshots and review materials.

Purchases and membership

- Configure monthly and annual subscriptions in both stores; connect via RevenueCat.
- If lifetime access is offered at launch, configure it as a separate non-consumable IAP, not a subscription.
- Clearly display price, billing period, auto-renewal terms, included access, and cancellation.
- Include Restore Purchases, Manage Subscription, Terms of Use, and Privacy Policy links.
- Clearly identify which features are free and which require Academy membership.
- Test new purchases, renewals, cancellations, expiration, refunds, upgrades, downgrades, lifetime access, and restoration.

Store assets

Apple: app icon; iPhone screenshots; iPad screenshots if supported; optional app-preview video; subtitle, promo text, full description, keywords.

Google Play: 512×512 icon; 1024×500 feature graphic; phone screenshots; tablet screenshots if supported; optional promo video; short + full description.

Screenshots should show the real app experience—not only title/login screens or artwork. Clearly mark when a shown feature requires Academy membership.

Review access

- An active review account or complete demonstration mode.
- Access to all membership-gated lessons, labs, tools, calculators, quizzes, certificates, and Career Finder.
- Clear instructions for reaching important features.
- A sample certificate and QR-verification workflow.
- Explanations of microphone-based tools and any non-obvious permissions.
- Live, accessible backend services throughout review.

Microphone, measurement, and safety

- Request microphone access only when a user opens a feature that needs it.
- Explain that microphone access powers SPL, spectrum/RTA, waveform, spectrogram, RT60, tuner, and related tools.
- State whether microphone audio is processed on-device, transmitted, or stored.
- Include appropriate limitations for mic-dependent measurements and calibration.
- Do not present the app as a medical device or a replacement for calibrated regulatory equipment.
- Keep Pro Audio Safety information and hazardous-sound warnings accessible.

Data inventory for store privacy forms

Classify each type by purpose, whether linked to the user, whether shared, whether used for tracking, and how it is deleted:

- First name and last initial
- Email address used for authentication
- Profile photo
- Country
- Device identifiers and push-notification token
- Purchase and entitlement history through RevenueCat
- Learning progress, achievements, quizzes, and certificates
- Optional community-directory profile and recorded consent
- Analytics, diagnostics, and crash information, if collected

Do not finalize either store's privacy disclosure until the production build and every included SDK have been audited.

5 | Requirement Sources

Apple: 30-char name/subtitle limits; Xcode 26 / iOS 26 SDK; full reviewer access; account deletion; UGC moderation (Apple metadata, upcoming requirements, App Review Guidelines).

Google: 80-char short description; API level 36; personal-account testing rule (org exempt); web deletion route; UGC moderation (Play store listing, target-API, testing, account-deletion, and UGC policies).

6 | Topic-Count Reconciliation (resolves the 166 vs 170 question)

Verified against the live catalog on 2026-09-13:

- **166 active topics** — what a learner browses and is quizzed on. Use this number in all public copy.
- The v3 set has 175 rows total (166 active + 9 inactive). The inactive rows are not learner-facing.
- Three of the four standing requirements are already counted in the 166 (Pro Audio Safety, Grounding & Electrical, Workplace Skills are all active topics). The fourth, Audio Fundamentals, is the lab proxy and is inactive by design — a lab, not a counted topic.
- So there is no “166 + 4 = 170.” The “170/171” figures were the August taxonomy-lock counts and are now stale.
- 36 professional programs, 20 fields, 50 subjects, and 1,800+ Career Finder roles are all separately verified.

Compiled by Computer A, 2026-09-13. Copy is Cháno's; membership/pricing framing to be finalized by Cháno. Store requirements change—re-check Apple/Google before submitting. Not legal advice.
